This is the 16th Data Report
from the Central and Arctic Region, Winnipeg

PREFACE

This study was funded by the Northern Oil and Gas Action Program (NOGAP), through the Department of Fisheries and Oceans, Central and Arctic Region. It is one of a series of projects being executed under NOGAP B.2, to provide background data for assessing the implications of hydrocarbon development and production on critical estuarine and marine habitats of the Canadian Arctic Coastal Shelf. This document constitutes NOGAP Report B2.11.

ABSTRACT

Hopky, G.E., D.B. Chipczak, and M.J. Lawrence. 1987. Seasonal salinity, temperature and density data for the Canadian Beaufort Sea Shelf, 1986. Can. Data Rep. Fish. Aquat. Sci. 661: iv + 268 p.

This report contains salinity, temperature and density (CTD) data collected by the Department of Fisheries and Oceans, Central and Arctic Region in the waters of the Canadian Beaufort Sea Shelf during 1986. Salinity and temperature profile data were measured using a Guildline Model 8870 probe deployed from the ice surface in March and May, and from the M.V. Sequel during July to September. Ice thickness and secchi depth were measured during periods of ice cover and open water, respectively. Salinity values for samples collected from bottle casts were measured with an Autosol Model 8400 salinometer. Density was calculated using salinity and temperature values.

During the ice cover periods of March and May, CTD profiles were measured at four and 25 stations, respectively. Two additional stations were sampled in May using bottle casts. For the open water July to September period, CTD profiles were measured at 62 stations. Replicate CTD profiling was conducted at most stations, on a seasonal basis.

The maximum depths of profiles measured from the ice surface ranged from 3.3 to 49.7 dbar. Salinity and temperature measurements ranged from 0.23 to 32.37, and -1.77 to -0.04°C, respectively. Maximum depths of profiles measured during the open water period ranged from 2.4 to 289.5 dbar. During this same period, profile measurements of salinity and temperature ranged from 0.11 to 34.78, and -1.66 to 13.81°C, respectively.

Key words: Arctic; coastal waters; salt-wedge estuaries; fresh water; saline water; thermocline; halocline; pycnocline; oceanographic data; light penetration.

RÉSUMÉ

Hopky, G.E., D.B. Chipczak, and M.J. Lawrence. 1987. Seasonal salinity, temperature and density data for the Canadian Beaufort Sea Shelf, 1986. Can. Data Rep. Fish. Aquat. Sci. 661: iv + 268 p.

Ce rapport renferme des données sur la salinité, la température et la densité (CTD) qui ont été recueillies par le ministère des Pêches et des Océans, région du Centre et de l'Arctique, dans les eaux du secteur canadien du plateau de la mer de Beaufort au cours de l'année 1986. Les données des profils de salinité et de température ont été obtenues à l'aide d'un sonde Guildline, modèle 8870, utilisée à partir de la glace, en mars et en mai, et à partir du Sequel, de juillet à septembre. L'épaisseur de la glace a été mesurée lorsque la surface était glacée et

la transparence de l'eau, déterminée au disque de Secchi, a été mesurée lorsque l'eau était libre. La salinité des échantillons recueillis au moyen d'échantillonneurs a été mesurée à l'aide d'un salinomètre Autosol, modèle 8400. La densité a été obtenue par calcul au moyen de la salinité et de la température.

Pendant que la surface de la mer était glacée, en mars et en mai, les profils CTD ont été mesurés respectivement à quatre (4) et à 25 stations. En mai, des échantillons ont été prélevés à deux autres stations à l'aide d'échantillonneurs. Au cours de la période d'eau libre, de juillet à septembre, les profils CTD ont été mesurés à 62 stations. L'établissement des profils CTD a été repris dans la plupart des stations, et à chaque saison.

Les profils mesurés à partir de la couche de glace l'ont été à des profondeurs variant de 3,3 à 49,7 dbar. Les mesures de salinité et de température variaient respectivement de 0,23 à 32,37 et de -1,77 à -0,04°C. Les profils mesurés au cours de la période d'eau libre l'ont été à des profondeurs variant de 2,4 à 289,5 dbar. Au cours de cette même période, les mesures des profils de salinité et de température s'établissaient respectivement entre 0,11 et 34,78 et entre -1,66 et 13,81°C.

Mots-clés: Arctique; eaux côtières; lame d'eau salée dans l'estuaire; eau douce; eau saline; thermocline; halocline; pycnocline; données océanographiques; pénétration de la lumière.

INTRODUCTION

The salinity, temperature and density (CTD) data presented in this report were collected as part of the Critical Arctic Estuarine and Marine Habitat Project (R.2) of the Northern Oil and Gas Action Program (NOGAP). The data represent one component of a suite of oceanographic measurements made by the staff of the Department of Fisheries and Oceans (DFO), Central and Arctic Region on the Canadian Beaufort Sea Shelf (Fig. 1) during 1986. This study has been ongoing since 1984. CTD results for 1984 and 1985 were published in Hopky et al. (1986).

A major objective of this NOGAP project is to identify and characterize estuarine and marine habitats of significance to the biological communities, primarily fish, inhabiting the Beaufort Sea Shelf. Salinity, temperature and density data will assist in the identification and delineation of potential habitat types. In addition, light attenuation (PAR - Photosynthetically Active Radiation), and nutrient and other chemistry related data are being gathered. Concurrent biological sampling includes: chlorophyll *a*, primary production studies, and life history studies of the zooplankton, ichthyoplankton and adult fish (e.g. Lacho 1986) communities.

A DH6 (Twin Otter) aircraft equipped with wheel skis and a Bell 206L helicopter were used during March and May to conduct sampling from the ice surface. The M.V. Sequel, a wooden hulled 12 m vessel, was chartered to conduct sampling during the open water periods. The data reported here are from an area that extends from Herschel Island on the west to Amundsen Gulf on the east, out to approximately the 200 m isobath (Fig. 2).

METHODS

The methods of data collection and data processing described below follow those utilized in 1984 and 1985 (Hopky et al. 1986).

DATA COLLECTION

Positioning

In March and May all stations except the three noted below were reached with either a Twin Otter aircraft or Bell 206L helicopter, both equipped with Global Navigation System (GNS) positioning equipment. Station 86001 was reached using an all terrain vehicle (Foremost Delta 3) and a mobile field camp. Its position was located by vehicle distance from shore and aircraft flypasts. Stations 86030 and 86031 were reached by truck and located by identification of nearby shore landforms and aircraft flypasts.

During July, August and September, stations were located using a combination of radar (Furuno Model CR240) fixes to shore, bathymetric charts and a JRC Model JLE-3850 satellite navigator with a nominal accuracy of ± 0.1 km.

CTD system

Station profiles were measured using a Guildline Model 8870 portable CTD system consisting of a probe, winch and deck unit. An Arctic Model probe was used during March and May, and an Open Ocean Model probe was used from July to September. Sensors on these probes measure temperature ($^{\circ}\text{C}$), salinity and depth, as pressure (dbar), with an accuracy of ± 0.02 , ± 0.04 and $\pm 1\%$ full scale, respectively. Calibration tests conducted prior to their use resulted in acceptable accuracies.

The winch was a 12/24 volt powered Arctic Model equipped with a single conductor oceanographic cable. Cable deployment rate was 0.35 m/sec.

The deck unit consisted of a power supply module and a display module. Power was provided by 2-12 volt batteries connected in series. Raw, serial data was recorded on magnetic tape using a portable audio cassette recorder. The display module provided a digital display of all channel outputs. A microprocessor in the display module calculated salinities using the UNESCO practical salinity scale 1978 (UNESCO 1981).

Bottle casts

Bottle casts were made using a 5 litre Van Dorn sampler. Conductivity ratios were obtained using an Autosol Model 8400 salinometer. Salinity was calculated using the UNESCO practical salinity scale 1978 (UNESCO 1981) on a Zenith 151 microcomputer.

DATA PROCESSING

Transfer of the CTD data from the audio tape, and its subsequent editing and reduction were made using a Zenith 151 microcomputer with programs written by DFO staff at the Freshwater Institute, and Dbase III software. CTD data were fed from the audio tape back into the Guildline deck unit, processed through an IEEE488 interface board located in the display module and subsequently stored on 5.25 inch floppy disks. Means of salinity and temperature were calculated for multiple readings at a single depth (dbar) point. Density, in kg-m^{-3} , was calculated using the international equation of state of seawater 1980 (UNESCO 1981). SAS Version 5.03 was used to generate data tables and data figures, respectively on an Andahl 58-50 computer, and a VAX/VMS 11 computer.

RESULTS

A summary of all stations sampled on the Beaufort Sea Shelf during 1986 is shown in Table 1. CTD profiles were measured at four and 25 stations, respectively during the ice cover periods of March and May. In May, salinity data was collected at two additional stations using bottle casts. For the open water, July to September period, CTD profiles were measured at 62 stations.

Locations for all stations sampled in 1986 are mapped for March and May (Fig. 3), July (Fig. 4), August (Fig. 5) and September (Fig. 6). Station depths ranged from 3 to 289 m (Table 1). Favourable ice conditions during the 1986 open water period resulted in extensive sampling of waters greater than 10-15 m deep. With the exception of the Herschel Island-western Mackenzie Bay region, this was not the case in either 1984 or 1985 - particularly the latter year - when ice conditions restricted vessel movement largely to water depths less than 10-15 m (Hopky et al. 1986).

Stations were generally sampled between 1500 and 0200 hours Greenwich mean time (Gmt) (Table 1). Ice thickness was measured at stations sampled in March and May, and secchi depth was measured at stations sampled between July to September (Table 1). The stations identified as 86A46 and 86R46 (Table 1) represent two CTD profiles measured at the same location (ie. 86046). The second profile, 86R46, recorded changes observed while the vessel was on station.

CTD data are tabulated by station and date in Appendix A, Tables A1.1-A1.95. Plots of the data are shown on the facing page with the corresponding station number and sampling date. Density, in $\text{kg}\cdot\text{m}^{-3}$, is plotted as sigma t (density - 1000). Depths are expressed in pressure units (dbar) except for stations 86030 and 86031 bottle cast data which are in meters.

The maximum depths of profiles measured from the ice surface ranged from 3.3 to 49.7 dbar (Appendix A). Salinity and temperature measurements ranged from 0.23 to 32.37, and -1.77 to -0.04°C, respectively. Maximum depths of profiles measured during the open water period ranged from 2.4 to 289.5 dbar. During this same period, profile measurements of salinity and temperature ranged from 0.11 to 34.78, and -1.66 to 13.81°C, respectively.

ACKNOWLEDGMENTS

The authors would like to thank G. Lacho, R. Sauvé and D. Rasmussen, DFO Winnipeg, for their assistance in the data collection. The skipper of the M.V. Sequel was W. Bellam. Twin Otter pilots were F. Hennessy and H. Perk. The helicopter pilot was W. Handley. Their considerable skills and dedication are gratefully acknowledged.

We thank the Polar Continental Shelf Project of the Department of Energy, Mines and Resources, Tuktoyaktuk, N.W.T., for logistic support. Ice and weather information provided by personnel at Canmar Marine and Beaudrill Marine, Tuktoyaktuk, was very helpful.

Assistance of DFO support staff, R. Lypka and C. Catt at the Freshwater Institute, Winnipeg, is appreciated. M. Capel and M. Bergmann, also of DFO Winnipeg, developed the software necessary to read CTD data from the Guildline/audio format into a microcomputer/floppy

disk format. We would further like to thank M. Bergmann for many useful and interesting discussions.
